We Handle Crane Engineering Tasks for All Brands . . . Turnkey

IMS Engineering Services is a licensed engineering firm. Our staff of registered professional engineers serves the needs of crane users and crane builders nationwide.

Here is How We Help You

IMS Engineering Services are available at your plant around the clock. We provide immediate field engineering services in response to crane emergencies, anywhere in the U.S. We take responsible charge of field technical operations to assure proper quality for engineered repairs.

Also depend on us for:

- Engineered Lifts
- Load testing
- Runway alignment surveys
- Duty Cycle Studies
- Accident & Failure Investigations

Overhead Crane Engineering Experts at Your Service

We are hands-on crane engineers, with many years of diverse field and office engineering experience. For mechanical, structural, or electrical matters, our well-rounded staff is actively engaged in capacity up rates, engineered repairs, modifications, modernizations, and inspections in all major industries:

- Primary Metals
- Cement, Refuse, Bulk Materials
- Heavy Manufacturing
- Lumber
- Power Utilities
- Petrochemical
- Government
- Automotive
- Special Industrial Applications

Our turnkey services include field consultation, inspections, surveys, calculations, feasibility studies, reports, design drawings, reverse engineering, fabrication & machining, field supervision.

What Types of Lifting Equipment Do You Depend On?

We work closely with plant personnel at all levels to diagnose and solve existing problems. We also help you plan for future production and maintenance requirements. You can be sure that our engineers already have experience with your specific industry and lifting application, including:

- Bridge cranes; all brands
- Gantry and portal cranes
- Bucket, grapple, magnet, hot metal cranes
- Automation systems
- Stackers cranes
- Jib cranes
- Monorail systems
- Transfer cars
- Special lifting devices

For over 80 combined years, we have provided heavy industrial crane users with quality service.

Resolve Crane Tracking Problems

- Diagnoses and solutions for crane tracking problems, abnormal rail and wheel wear, fatigue cracks, bearing failures.
- Runway surveys and alignment analysis.
- Precise measurement and alignment of bridge wheel assemblies in the field.

Additional Engineering Services

IMS offers the complete spectrum of engineering services and custom manufacturing for cranes, hoists, and runways. We provide project cost estimates for modernizations, field repairs, replacement parts, and new, custom components. We also provide valuable assistance with:

- Development of formal specifications for new equipment bid solicitation.
- Safety inspections and evaluations for compliance with current industrial safety codes and engineering standards.
- Studies and analyses to reduce maintenance costs and maximize usable crane life.
- Fatigue life studies to estimate remaining useful crane life.
